

Monk Media CRM

Enterprise Workspace Operations Manual

A comprehensive handbook outlining system architecture, portal roles, database synchronization, financial invoices, task tracking, and automatic reminders chime systems.

DOCUMENT METADATA

Version: 2.1 (Production Export Release)

Date: July 2026

Prepared For: Monk Media Production, Accounts & Administration Teams

Target Domain: crm.monkmedia.ca (GitHub Pages Static Host)

1. System Roles & Portal Isolation

The Monk Media CRM is divided into three distinct workspace portals to enforce role-based access control and prevent unauthorized reads/writes.

Administrator Portal (/login/admin)

Provides full read/write management clearance. Admins can create and delete team member profiles, oversee total agency billing pipelines, configure client sheets, set projects, adjust financial parameters, and inspect all monthly reports. Admin credentials are strictly locked and rejected on non-admin login portals.

Account Manager Portal (/login/manager)

Designed for client-facing account managers. Managers can view client lists, inspect progress trackers, create new tasks/projects, and manage client-specific financial transactions. They are restricted from team management and full-system metadata options.

Team Member Portal (/login/team)

Designed for production contractors and employees. Team members can view their assigned projects, edit task priorities, upload personal documentation (e.g. contracts), log hourly work items, and synchronize calendar deadlines.

CRITICAL SECURITY POLICY ENFORCEMENT

Administrator credentials are hard-locked. If a user with role 'admin' attempts to log in via the Manager or Team portal, the system automatically signs out the session, aborts routing, and triggers an 'Access Denied' alert.

2. Client Management & In-Table CRUD

Clients form the core anchor of all activities. The CRM features instant in-table modifications, detail profile folders, and strict deletion logs.

In-Table Inline CRUD Dropdowns

Status and Priority fields inside tables are color-graded select dropdowns. Changing a client status (e.g. from 'Active' to 'On Hold') directly updates the Cloud Firestore database in real time with high-contrast indicator pills (Emerald, Sky, Amber, Rose).

Delete Anywhere Logs

A trash delete action is mounted on every Client, Project, Task, and Team table row. Deletion is authenticated and secure, showing confirmation modal checks and launching Toast notifications.

Dynamic Profile Folders (/clients/[id])

Each client has a dedicated profile directory compiling active projects, financial invoices logs, project status bars, and client contracts uploads. Under static environments, this dynamic component operates client-side automatically.

TABLE PILL COLOR GRADING KEY

- | | |
|--|--|
| • Emerald Green: Active / Paid / Completed | • Sky Blue: In Progress / Sent |
| • Amber Gold: Pending / Lead / On Hold | • Rose Red: Overdue / Cancelled / Unpaid |

3. Project Tracking & Leads Pipeline

Projects and Leads are synchronized into automated progress bars and interactive opportunities boards.

Kanban Leads Pipeline (/leads)

Tracks potential opportunities through four distinct columns: 'Inquiry', 'Proposal Sent', 'Negotiation', and 'Closed Won'. Leads can be created in-table and easily dragged or deleted.

Automatic Conversion to Client Profile

A one-click action converts any Closed Won lead into a full Client Profile. This automatically migrates contact details and provisions Firestore structures without requiring manual entry.

Dynamic Projects Dashboard (/projects)

Aggregates projects, mapping them to their anchor Client, start dates, and budgets. Features inline status updates and automatic client-profile sync logs.

4. Financial Operations & Reports

Monk Media CRM provides integrated accounting tools to handle billings, cash flows, and generate client sheets.

Invoices, Payments & Expenses Logs

Log invoices containing client metadata, records, dates, and amounts. Track payments and expenses with clean dropdown status indicators (Paid, Unpaid, Pending).

Client PDF Invoice Generation

A built-in PDF generator renders client-ready invoices directly from the web client. Clicking 'Download PDF' compiles layout structures into documents on-the-fly.

3D Isometric Cuboid Revenue Graphs

The Dashboard features a modern isometric 3D Bar Chart depicting monthly cash flows. Custom SVG face renderers depict projections with premium shadows.

Monthly Excel Sheets & Clean Reports

The Reports tab lists invoices, cash flow indices, and permits exporting clean, sorted monthly sheets for corporate audits.

5. Reminders Alarms & Task Pendencies

To ensure production dates are never missed, the CRM integrates a global task alerts monitoring loop.

Automatic Real-Time Task Checking

The system watches the active user's tasks. If a task is overdue or due today and remains incomplete ('Not Completed' or 'Cancelled'), the alarm triggers automatically.

Web Audio Melodic Chimes

Ringinɡ triggers a synthesized 3-note melodic alarm tune (E5-G5-C6) in a continuous loop, ensuring browser audio permission blocks are cleanly bypassed.

Overlay Ringing Modal & Silence Actions

Triggers a full-bleed modal displaying the overdue task name, details, notes, and deadline. Clicking 'Silence & Dismiss Alert' cancels the chime and mutes notifications for that specific task ID.

Session Silenced Ignore List

Silenced alerts are saved to browser localStorage, ensuring the chime does not ring repeatedly upon page reloads. Updating the task status to Completed clears the alert.
